PROFILE

Cloud engineer with 10+ years of experience building and supporting AWS infrastructure, Kubernetes platforms, and deployment automation in enterprise environments. Strong background in Terraform, CI/CD, observability, and secure cloud operations. Experienced in improving platform reliability, reducing cloud costs, and building reusable infrastructure for engineering teams.

TECHNICAL SKILLS

- **Cloud:** AWS, Azure
- **Containers:** Kubernetes, EKS, Docker, Helm
- **Infrastructure as Code:** Terraform, Terragrunt, CloudFormation, Ansible
- **CI/CD:** GitHub Actions, GitLab CI, Jenkins, Harness, ArgoCD
- **Monitoring & Observability:** Prometheus, Grafana, Loki, Datadog
- **Data Platforms:** Airflow (MWAA), Kafka, Flink, Redis, PostgreSQL
- **Security:** IAM, SCPs, GuardDuty, SOC2, GDPR
- **Scripting:** Bash, Python, YAML, HCL

WORK EXPERIENCE

DevOps Engineer | Charter Communications May 2025 – Present
Greenwood Village, CO

- Designed and deployed AWS-based platform infrastructure for 12+ data engineering teams, improving reliability, access control, and day-to-day operations across shared AWS environments.
- Built and managed Amazon MWAA (Airflow) environments for production data workflows, supporting secure orchestration of production DAGs with better access control and audit visibility.
- Developed Python-based automation to rotate IAM access keys across 200+ AWS accounts, reducing credential exposure risk and eliminating manual security operations.
- Strengthened IAM governance across 50+ AWS accounts by implementing least-privilege access models, SCP guardrails, and cross-account access controls.
- Engineered Kubernetes-based GitLab runners on EKS to improve CI/CD scalability, isolation, and execution reliability for enterprise delivery pipelines.
- Built AWS Step Functions workflows with validation, retry logic, and audit checkpoints for operational processes.
- Built secure data protection workflows for sensitive customer data using Python and EMR Serverless, improving compliance controls for large-scale data processing.

- Mentored junior engineers on AWS architecture, Terraform standards, and Python automation best practices.

Cloud Engineer | LogRhythm Inc October 2020 – December 2024
Broomfield, CO

- Designed and scaled cloud infrastructure across AWS and GCP, improving platform reliability, service availability, and operational visibility for engineering teams.
- Reduced GitHub Actions build times from 90 minutes to 20 minutes by redesigning CI pipelines with intelligent test routing and monorepo-aware execution.
- Built internal Kubernetes tooling, including custom operators and deployment frameworks, to standardize infrastructure delivery across 30+ engineering teams.
- Architected and scaled enterprise Kubernetes platforms with multi-tenancy, autoscaling, service isolation, and integrated observability using Prometheus, Grafana, and Loki.
- Reduced annual cloud spend by $500K through FinOps initiatives including reserved capacity planning, rightsizing, and proactive cost monitoring.
- Implemented centralized SSO with Keycloak across cloud environments, improving security posture and reducing authentication-related operational issues.
- Simplified release processes by standardizing deployments, reducing manual configuration, and improving consistency across teams.

Cloud Engineer | Nutrien Ag Solutions May 2020 – September 2020
Loveland, CO

- Led AWS modernization initiatives for business-critical workloads, reducing infrastructure cost by 25% while maintaining high availability across EKS and RDS.
- Standardized infrastructure provisioning using Terraform Enterprise, reducing configuration drift and improving deployment consistency.
- Implemented GitOps-driven continuous delivery workflows with Harness for multi-environment Kubernetes deployments.
- Integrated automated deployment verification and rollback using Prometheus and CloudWatch, reducing incident recovery time.

DevOps Engineer | Empower Retirement September 2019 – April 2020
Greenwood Village, CO

- Supported modernization of enterprise data platforms by automating AWS infrastructure provisioning and improving reliability of RDS migration workflows.
- Reduced provisioning effort and deployment risk through reusable Terraform modules and standardized infrastructure patterns.

DevOps Engineer | Academy Sports January 2019 – September 2019
Katy, TX

- Built and deployed containerized microservices using Docker and Kubernetes, improving deployment speed and service scalability.

- Supported microservices modernization and release automation for distributed retail applications.

Cloud Engineer | Wolters Kluwer September 2018 – December 2018
Chicago, IL

- Automated AWS infrastructure provisioning and migration workflows using Terraform, improving delivery speed and reducing manual effort.
- Implemented secure cross-account access patterns and network isolation controls for multi-tenant environments.

DevOps Engineer | Optum February 2018 – September 2018
Eden Prairie, MN

- Built highly available AWS infrastructure for critical enterprise applications using EC2, Route 53, and Kubernetes.
- Improved application resilience and scalability through container orchestration and deployment automation.

DevOps/Build and Release Engineer | Servizon August 2012 – November 2015
Hyderabad, Telangana, India

- Supported build, release, and deployment automation for enterprise applications across development and production environments.

EDUCATION

Master of Science, Cyber Systems and Information Security January 2016 - December 2017
Auburn University at Montgomery
