Profile

Cloud and platform engineer with 10+ years of experience building and operating enterprise cloud infrastructure, Kubernetes platforms, infrastructure as code, and delivery automation. Designed and developed an enterprise multi-application GitOps platform on AWS EKS Auto Mode supporting an internal portal for AI-assisted applications developed by engineers across the organization. Focused on developer enablement, reliable delivery, security, governance, and cloud cost visibility.

Technical Skills

- Cloud & containers: AWS, Azure, GCP, Kubernetes, Amazon EKS / EKS Auto Mode, Docker, Helm
- Infrastructure & delivery: Terraform, Terragrunt, CloudFormation, Ansible, GitHub Actions, GitLab CI, Jenkins, Harness, Flux, Argo CD, GitOps, blue-green deployments
- Observability & data: Prometheus, Grafana, Loki, Datadog, Airflow / Amazon MWAA, Kafka, Flink, Redis, PostgreSQL
- Security & automation: IAM, SCPs, GuardDuty, access governance, Python, Bash, YAML, HCL

Professional Experience

DevOps Engineer | Charter Communications

May 2025 - Present | Greenwood Village, CO

- Designed and developed an enterprise internal developer platform on AWS EKS Auto Mode supporting an internal portal for AI-assisted applications built by engineers across the organization; development is ongoing.
- Implemented declarative application onboarding, Helm-based reusable application infrastructure, and Flux-based GitOps delivery with CI/CD automation for multiple applications and their differing dependencies.
- Implemented blue-green deployments and release safeguards, workload identity, and secrets management to support secure, governed application delivery.
- Implemented Kubernetes FinOps and cost attribution within the platform: team names and organizational cost codes identify application ownership and associate infrastructure resources with responsible teams.
- Designed and deployed AWS platform infrastructure supporting 12+ data engineering teams, including production Amazon MWAA workflows.
- Built Python automation for IAM access-key rotation across 200+ AWS accounts and strengthened least-privilege governance across 50+ accounts through SCPs and cross-account controls.
- Built an IAM key-rotation UI enabling access-key owners to rotate their keys as part of a scheduled quarterly rotation process.
- Integrated the rotation workflow with Datadog to update dashboards with relevant rotation data and enable users to configure alerts through communication channels.
- Engineered Kubernetes-based GitLab runners on EKS for scalable, isolated CI/CD execution.
- Built Step Functions workflows with validation, retries, and audit checkpoints, plus data-protection workflows using Python and EMR Serverless.
- Mentored junior engineers on AWS architecture, Terraform standards, and Python automation.

Enterprise platform and IAM key-rotation tool source code is proprietary and unavailable publicly.

Cloud Engineer | LogRhythm Inc.

October 2020 - December 2024 | Broomfield, CO

- Designed and scaled AWS and GCP infrastructure, with Kubernetes multi-tenancy, autoscaling, service isolation, and Prometheus, Grafana, and Loki observability.
- Reduced GitHub Actions build times from 90 minutes to 20 minutes through intelligent test routing and monorepo-aware execution.
- Built Kubernetes tooling, custom operators, and deployment frameworks supporting 30+ engineering teams.
- Contributed to FinOps initiatives associated with $500K in annual cloud-spend reduction through reserved capacity planning, rightsizing, and cost monitoring.
- Implemented centralized Keycloak SSO and standardized deployment processes across teams.

Cloud Engineer | Nutrien Ag Solutions

May 2020 - September 2020 | Loveland, CO

- Modernized AWS workloads across EKS and RDS, helping reduce infrastructure costs by 25% while maintaining availability.
- Standardized provisioning with Terraform Enterprise and implemented GitOps-driven delivery with Harness for multi-environment Kubernetes deployments.
- Integrated deployment verification and rollback using Prometheus and CloudWatch.

DevOps Engineer | Empower Retirement

September 2019 - April 2020 | Greenwood Village, CO

- Automated AWS provisioning and supported RDS migration workflows with reusable Terraform modules and standardized infrastructure patterns.

DevOps Engineer | Academy Sports

January 2019 - September 2019 | Katy, TX

- Built and deployed Docker and Kubernetes microservices and supported release automation for distributed retail applications.

Cloud Engineer | Wolters Kluwer

September 2018 - December 2018 | Chicago, IL

- Automated AWS provisioning and migrations with Terraform; implemented cross-account access and network isolation for multi-tenant environments.

DevOps Engineer | Optum

February 2018 - September 2018 | Eden Prairie, MN

- Built highly available AWS infrastructure using EC2, Route 53, and Kubernetes, with container orchestration and deployment automation.

DevOps / Build and Release Engineer | Servizon

August 2012 - November 2015 | Hyderabad, India

- Supported enterprise build, release, and deployment automation across development and production environments.

Education

Master of Science, Cyber Systems and Information Security

Auburn University at Montgomery | January 2016 - December 2017
